

Product overview

Desiccants for the agriculture industry

Sustainable solutions to prevent moisture damage to agricultural commodities during shipping:

- High-efficiency desiccants with extraordinary absorption capacity to protect your cargo.
- Carbon neutral desiccants after offset.
- Installation accessories made with recycled plastics and optimized packaging.
- Optimized desiccant mix and high quality materials to prevent water leakage.

Contributing to a sustainable food industry

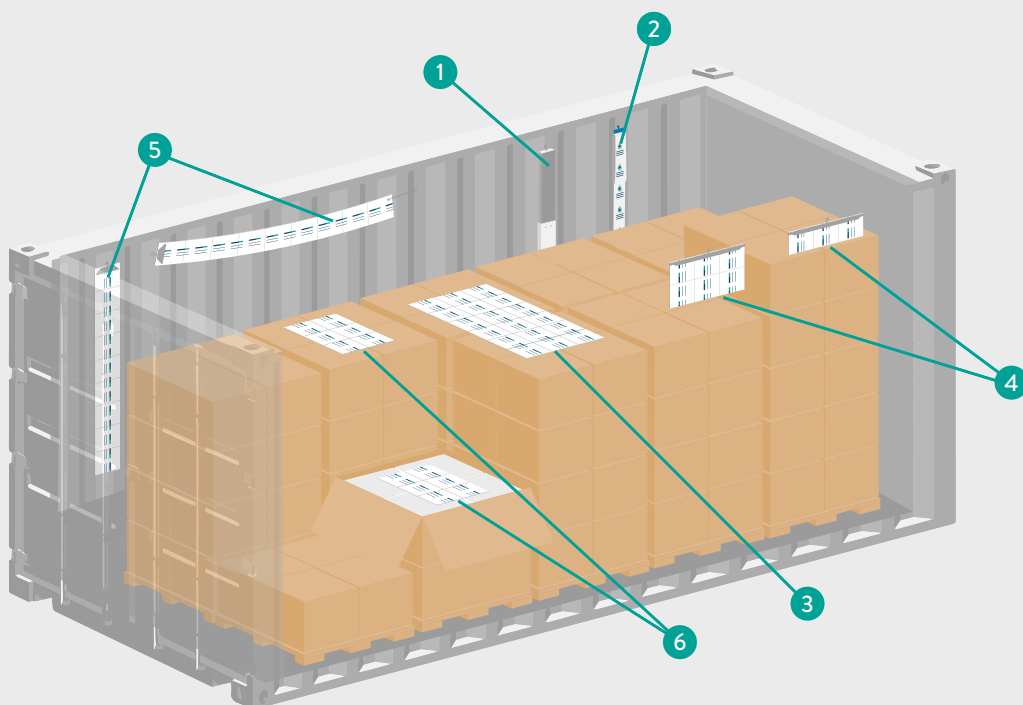

Food loss in supply chains is a large, yet unnecessary problem. Part of the waste is due to moisture damage – but moisture damage can easily be avoided. Absortech offers effective moisture damage prevention solutions. A good process and minor investments in desiccants leads to cost reductions due to reduced scrapping, and contributes to a sustainable food industry.

Performance and sustainability

Absortech offers two types of calcium chloride desiccants: **liquid water** and **AbsorGel®**. The first ones contain only calcium chloride that dissolves the absorbed water into a brine. Whereas AbsorGel® desiccants contain an optimised mix of 94% pure calcium chloride and starch and binds moisture into a gel.

AbsorRange™ desiccants tick all boxes: an absorption capacity that outperforms other traditional desiccants and a low carbon footprint.

Our desiccant range for your industry

Absorpole®

Absorpole® was the first carbon-neutral container desiccant in the market. It is made with low CO₂-footprint calcium chloride, non-woven and recycled plastic. Available R-to-R program.

AbsorGel® Max/Compact

AbsorGel® Max and Compact are desiccants that fit into highly loaded containers. The AbsorHanger™ can easily be removed upon arrival and can also be recycled.

Absorbag®

Absorbag® is a very cost-effective container desiccant. It is made with low CO₂-footprint calcium chloride, non-woven and PE plastic. It is installed vertically.

AbsorGel® Hanging

The two versions of AbsorGel® Hanging, C and X, are versatile products as they can either be installed vertically (fitting into the container wall) or horizontally (close to the container roof).

AbsorGel® Blanket

AbsorGel® Blanket is a desiccant blanket to be placed on top of the cargo, so there is no loss of cargo space. It is very easy to install on top of the goods before those are loaded into the container.

AbsorGel® Sheet

AbsorGel® Sheet is a modular sheet desiccant available in different square combinations. It should be installed on top of the goods. It is also suitable for use inside crates, cartons and other packaging.

Absortech helps you prevent moisture damage during transport. Our promise is to protect your brand, increase your savings and lower the environmental footprint of your logistics processes. We are a pioneer in moisture damage prevention with headquarters in Sweden. Since 1996, we have been offering a wide range of inhouse developed and produced desiccants made from calcium chloride. Peace of Moisture Mind® is our moisture damage prevention concept, which includes steps like audits, tests and global supply chain solutions. We are committed to base our operations on sustainable principles and help businesses like yours implement sustainable solutions to prevent moisture damage.
